Professional Summary

Full-Stack Software Engineer with a M.S. in Software Engineering from San Jose State University and hands-on industry experience at Cisco Systems. Skilled in React, Python, FastAPI, and RESTful API design, with a proven track record of shipping production features that accelerated key engineering workflows. Coursework and projects span Machine Learning, AI Agents, NLP, and distributed systems with applied work in LLM integration, recommendation engines, and cloud-deployed applications

Education

San Jose State University

Master of Science in Software Engineering

Aug 2024 – May 2026

San Jose, CA

Relevant Coursework: Algorithms, Distributed Systems, ML, Cloud Computing, AI Agents, Prompt Engineering, NLP, Reinforcement Learning

Acropolis Institute of Technology and Research

Bachelor of Technology in Computer Science

Aug 2019 – May 2023

Indore, India

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Object-Oriented Design, Computer Networks

Work Experience

San Jose State University

Student Assistant

Mar 2025 – May 2026

San Jose, CA

- Redesigned the department website (5,000+ monthly users) using a CMS and WCAG 2.1 accessibility standards, reducing usability-related support tickets by 30%.
- Automated course scheduling workflows by building structured Excel validation templates with rule-based logic, saving 8+ hours of manual coordination work per week for department staff.
- Maintained technical documentation and provided hands-on support for department systems, standardizing knowledge transfer processes that improved operational consistency.

Cisco Systems Pvt. Ltd.

Software Engineer

Sep 2023 – Jul 2024

Bangalore, India

- Architected an IPv6 compatibility analysis tool that evaluated 100+ enterprise network configurations, cutting migration readiness assessment time by 35% and enabling the network team to prioritize high-risk devices faster.
- Built a component-driven React frontend integrated with REST APIs that surfaced real-time bandwidth allocation data for 20+ engineers thus eliminating a manual reporting process and reducing coordination overhead by 50%.
- Designed and implemented RESTful backend services powering a resource allocation dashboard; added structured input validation and centralized error handling that reduced data defects and production bugs by 20%.
- Partnered cross-functionally with frontend engineers, network architects, and product stakeholders through all phases of the Agile sprint cycle, from requirements refinement to code review.

Projects

AI Code Reviewer | *Python, JavaScript, LLM Integration, REST APIs, Git Integrations*

- Developed an LLM-powered code review VS Code extension that integrates live repository context and version-control APIs; reducing average pull request review time in internal testing across multi-file diffs.
- Engineered prompt workflows to analyze code diffs, detect logical defects, and generate structured, context-aware feedback to enable reviewers to identify issues missed by static linters.
- Designed a modular backend architecture supporting multi-repository ingestion with scalable REST APIs, enabling concurrent review workflows without code duplication or state conflicts.

Fashion Recommender System | *Python, TensorFlow, FastAPI, Docker, MLflow*

- Built a hybrid recommendation engine combining collaborative filtering with CNN visual embeddings, improving recommendation accuracy by 18% over a baseline content-only model on a 50K-item catalog.
- Deployed real-time inference via FastAPI endpoints served inside Docker containers; tracked all experiments with MLflow to ensure reproducible model evaluations and deployment artifacts.

Book Table | *React, FastAPI, AWS EC2, CI/CD, SQL*

- Deployed a full-stack booking platform on AWS EC2 with role-based access control supporting concurrent authenticated sessions; reduced failed transactions by 20% through backend validation and structured exception handling
- Automated CI/CD pipelines using GitHub Actions, enabling zero-downtime deployments and cutting average release turnaround from hours to minutes

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, Java, C++, SQL, Bash, HTML/CSS

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, SQLite

Frameworks/Libraries: React, FastAPI, Django, Flask, Node.js, TensorFlow, PyTorch

Cloud and DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Git, Linux, Azure, GCP

Systems and Architecture : RESTful APIs, Microservices, Multi-Threading, Concurrency, TCP/IP, Data Modeling

Certifications

CCNA - Cisco Certified Network Associate

AWS Community Day Volunteer (2x)

Adobe Student Ambassador
